/Trinh Vo Dinh/ Primary Examiner, Art Unit 2821 Continuation of 11. does NOT place the application in condition for allowance because: Applicant's arguments filed 10 July 2008 have been fully considered but they are not persuasive.

Response regarding to objection to the drawing:

Applicant argues that "the drawing fully complies with these requirements in that Fig. 3, along with paragraph 0021, indicates where the recited part of the bandwidth broadening resonant circuit may be located (at boxes 32 or 34, between a feed pillar 24, 26 and the shorting pillar 22), and indicates the circuit board (14) on which the remaining portion of the bandwidth broadening resonant circuit resides". However, examiner respectfully disagrees. The drawing not fully complies with these requirements in that Figure 3, along with paragraph 0021.

In Figure 3, the box 32 between the feed pillar 26 and the shorting pin 22 and the box 34 between the feed pillar 24 and the shorting pin 22 are only gaps (or areas). Figure 3 does not show a bandwidth broadening resonant circuit and its arrangement. Therefore, the objection of the limitation "wherein an area between the at least one feed pillar and the shorting pillar contains part of a bandwidth broadening resonant circuit, a remaining portion of the bandwidth broadening resonant circuit residing on a circuit band that contains the rif circuit. In lines 1-4 of claim 16 is still maintained under 37 CFR 1.3(a). The drawings must show every feature of the invention specified in the claims.

Response regarding to 102 rejection:

Applicant's argues that Tracy does not disclose an antenna connected by a self supporting member that includes a feed pillar and a shorting pillar as claimed.

Examiner respectfully disagrees. Tracy clearly discloses, in Figure 1, an antenna connected by a self supporting member (108) that includes a feed pillar (112, 148, 140, and a shorting pillar (114, 144, 140). Since the feed element 109 in Figure 1 of Tracy has the same structure as claimed invention, it is considered as the self supporting member of the claimed invention.
